

Zora AI™ | Comparing AI Approaches: Why Zora AI Stands Out

Zora AI™
by Deloitte

Option	Best fit	Watch-outs
 Generic LLMs / Claude / ChatGPT	Fast drafting, summarisation and Q&A	Not finance-specific; controls, auditability and execution must be built
 ERP / workflow native AI	Embedded in existing system workflows	Platform-bound; weak for cross-system orchestration
 Traditional BI / analytics	Reporting, dashboards and KPI tracking	Insight-led; limited decision automation or governed workflow execution
 Internal build	Tailored to client tech stack and data	High investment to build, govern and maintain
 Zora AI	Finance IP + AI insight + governed workflows + cross-system orchestration	Requires initial alignment to client data structures, policies and KPI definitions to tailor outputs to the client context

Takeaway

Zora AI **complements** the existing estate - connecting **insight, decisioning** and **action** across finance workflows.

Zora AI™ | Why Zora AI?

Four pillars that turn finance AI ambition into governed execution

Zora AI™
by Deloitte

01

Purpose-built for enabling functions

- Deloitte best practice IP & business logic
- Enabling functions standard KPIs, metrics & workflows
- CXO-focused use cases
- Transactional best practice processes with localisation packages

02

Governed by design

- Auditability & human oversight
- Enterprise controls & governance
- Client data stays in agreed environment

03

From insight to action

- Beyond reports and recommendations
- Insights connect to workflows
- Supports Advise-to-Perform journey
- Supports enabling functions optimisation and scalability

04

Works across your technology estate

- Orchestrates systems & data sources
- Complements ERP, workflow & analytics
- Adapts to client policies & hierarchies

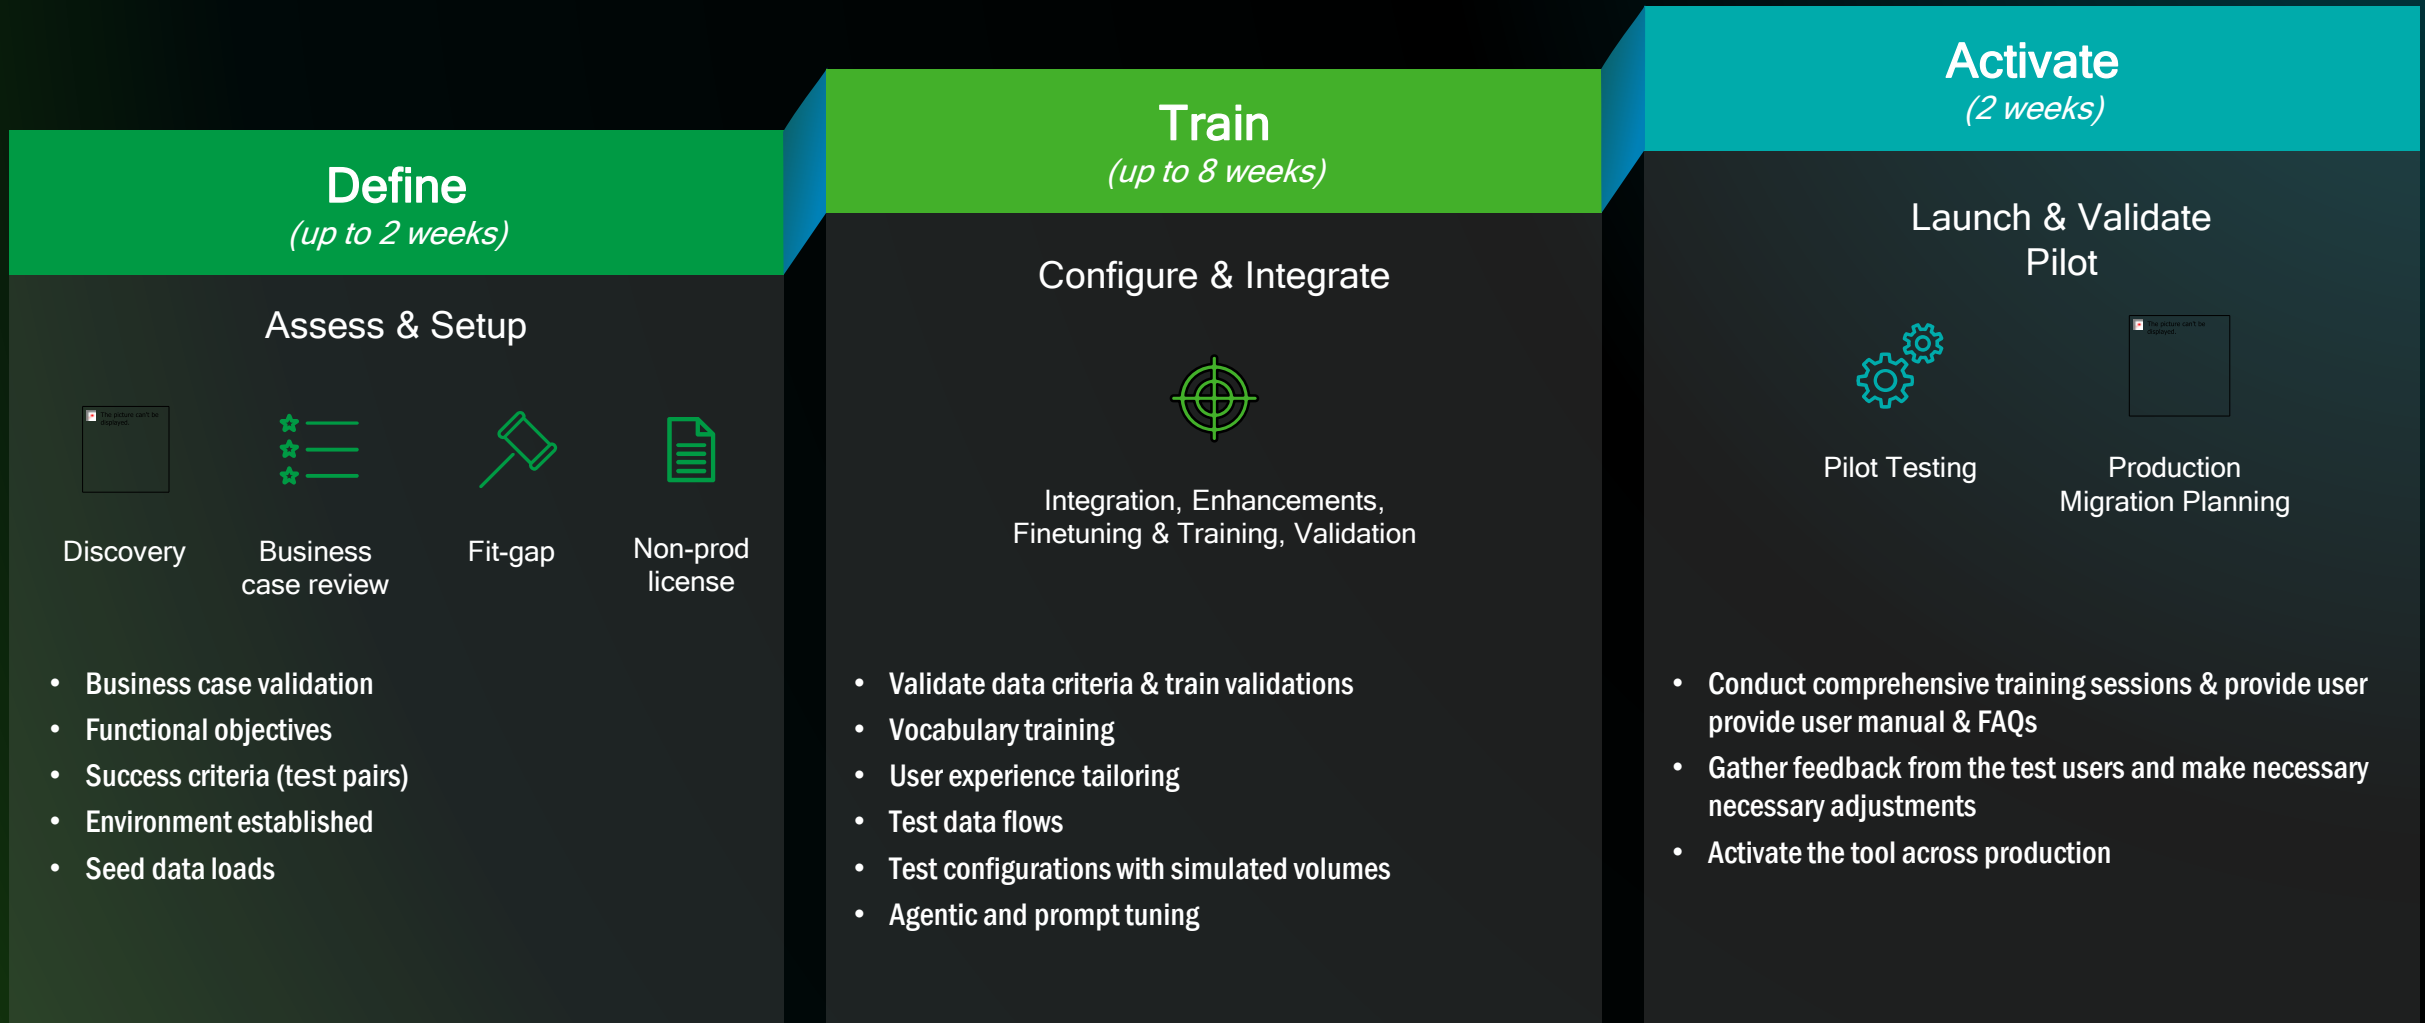

Takeaway

Zora AI is a finance platform - combining Deloitte expertise, governed AI and cross-system orchestration to move from insight to action.

ZoraAI™ : Pilot Activation Methodology

Zora AI™
by Deloitte

Timeline will vary depending on complexity, customization, data maturity, and other factors
